ESSENTIAL PERSONNEL MEMORANDUM

To Whom It May Concern:

AMERICAN BIO RECOVERY ASSOCIATION MEMBERS HAVE been educated certified and properly trained to respond to public health emergencies. ABRA's Member companies have the training and knowledge to handle gruesome events such as suicides, shootings, mass-casualties, stabbings, fecal contamination, spoilage, and other emergencies. ABRA Member companies have also been on the front lines for the decontamination of Anthrax, Norovirus, C. Diff (clostridium difficile), MRSA (methicillin resistant Staph), superbugs, listeria, and many other types of dangerous bacteria and viruses. We can also help decontaminate facilities impacted by controlled substances such as meth, fentanyl and opioids.

To Validate this: Please visit www.americanbiorecovery.org and click on find an American Bio Recovery Member Company. To validate technicians please see ABRA's validate a technician link on the home page.

Please allow this Member to have access so that they may service their clients in the effort to mitigate the spread of this pathogen.

ABRA is the only third-party non-profit organization dedicated to the education and certification of technicians and companies in the Bio Recovery Industry. The Centers for Disease control mentions the Association as a resource for pathogen mitigation during the Ebola Crisis and we can do this for COVID-19.

ABRA's objective is "to achieve and maintain the highest levels of competence among members in the performance of their profession. To teach, instill and require the highest technical, ethical and educational standards." ABRA certified firms are required to maintain proper insurance, OSHA compliance, Bloodborne Pathogen training records, respirator fit testing, proper handling of biohazardous waste and other laws or requirements in order to maintain good standing with the American Bio-Recovery Association aka ABRA.

Sincerely,

Thomas Licker, CBRM
President

American Bio Recovery Association | Established in 1996
